SUMMARY

Motivated Computer Engineering student with a strong foundation in coding, software development, and problem-solving. Passionate about building scalable web applications and known for strong communication and public speaking skills. Eager to contribute to real-world tech projects in collaborative environments.

TECHNICAL SKILLS

Languages: C, C++, Python, HTML, CSS, JavaScript

Frameworks & Libraries: React.js, Node.js, Express.js, Numpy, Pandas, Tensorflow

Developer Tools: Git, GitHub, Postman, VS Code, Google Colab, MySQL, MongoDB

Concepts: Data Structures and Algorithms (DSA), Web Development, Machine learning

SOFT SKILLS

Communication: Effective Communication, Public Speaking, Presentation Skills

Leadership & Teamwork: Team Collaboration, Leadership, Cross-functional Coordination

Problem Solving: Analytical Thinking, Critical Thinking, Creative Problem Solving

Work Ethic: Adaptability, Time Management, Fast Learning, Attention to Detail

EDUCATION

Thapar University

Bachelor of Engineering in Computer Engineering — CGPA: 8.15

Patiala, Punjab

2023 - 2027

Modern School

Senior Secondary — Percentage: 94.6%

Jaipur, Rajasthan

Graduated : 2022

PROJECTS

Car Rental Booking System | MongoDB, React.js, Express.js, Node.js

- Developed a full-stack MERN application enabling users to book cars based on pickup, drop location, date, and real-time availability.
- Built RESTful APIs with Node.js and Express.js and managed data using MongoDB for users, cars, and bookings.
- Designed a responsive and user-friendly frontend in React with search, filter, and booking features.

EcoCart – Smart Retail & Sustainability Advisor | YOLOv8, FastAPI, OpenAI, ChromaDB

- Developed a vision module using YOLOv8 and ByteTrack for real-time product detection in smart carts.
- Created a FastAPI backend with OpenAI-powered LLM agents for advising eco-friendly alternatives.
- Achieved 92%+ detection accuracy with sub-second inference latency

ADR Prediction using Graph Neural Networks | PyTorch Geometric, GNN, RAG

- Built a GNN-based model on a biomedical graph with 20K drugs to predict adverse drug reactions.
- Achieved 99.1% AUC and 98.5% AUPRC, outperforming baselines by 15%.
- Integrated RAG for explainability, improving rare ADR detection by 18% and reducing false positives by 30%.

TRAINING COURSES

Working with BigQuery | Coursera

- Completed hands-on training in Google BigQuery for large-scale data analysis, SQL querying, and cloud-based data warehousing.
- Certificate:** [View Credential](#)

ACHIEVEMENTS

- Solved 150+ algorithmic problems, translating complex challenges into efficient, scalable solutions – ready for real-world software development.
